Level design

Maps (32 px tiles)

- **Outside** (`map.tmx` , 40×31): starting area, the player spawns at “start”.
- **House surroundings** (`house.tmx` , 40×26): safe place, links the outside, the house interior and the warehouse.
- **House interior** (`house_interior.tmx` , 50×40): safe place with the bed (sleep, day/night) and a flickering TV.
- **Warehouse** (`warehouse.tmx` , 100×70): biggest map, reached by car.

Level flow
Outside → House surroundings → House interior
House surroundings → Warehouse (car cutscene, skippable with Space or Enter)

How a map is built in Tiled

- `collisions` : rectangles that become walls
- `events` : spawn points, doors (`target` + `spawn`), cutscene doors, bed
- `lights` : lamps, cones, sun, TV, flicker, colour
- `bed` / `bed_sleeping` : tile layers swapped when the player sleeps

Design intentions
Horror pacing: open outside → safe house → dangerous warehouse. Light guides the player and darkness hides threats. Sleeping changes the time of day.
